Abstracts

According to our (Global Info Research) latest study, the global Continuous Opacity Monitoring Systems (COMS) market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

COMS (Continuous Opacity Monitoring Systems) uses light to determine opacity levels. A light shone across a stack bounces off a mirror on the other side and returns to be measured. How much light went out versus how much came back is used to calculate the % opacity value. Using this system a plant can calculate the accurate opacity percentage and make sure all EPA regulations are met (a typical opacity limit is no greater than 20%). Continuous opacity monitors are typically used by facilities which rely on waste materials, oil, coal, wood or other fossil fuels for combustion. Natural gas combustion sources don't measure opacity as the burning of natural gas does not produce smoke.
