According to our (Global Info Research) latest study, the global Continuous Passive Motion Devices market size was valued at USD 594.9 million in 2023 and is forecast to a readjusted size of USD 754 million by 2030 with a CAGR of 3.4% during review period.

Continuous passive motion devices are used to ensure proper motion of limb, particularly, of the leg or arm. Continuous passive motion devices are used in the first stage of rehabilitation following the traumas and soft tissue medical procedure. These devices aims at continuous and repeated motion of joints in a structured range of motion. Continuous passive motion devices are in great demand owing to their wide range of applications in various medical fields involving children, bariatric patients and for reconstruction from joint surgery as in the anterior cruciate ligament ACL reconstruction and knee replacement. The increasing cases of traumas and joint replacement and the need to rehabilitate them all over the globe are facilitating the market for continuous passive motion devices. These devices improve long term functions, knee extensions in short or long term and also long term knee flexion. For the treatment of standard mobilization, continuous passive motion devices are useful. The daily treatment increases the mobility of affected joint. The continuous passive motion devices ensures safe exercise throughout the repair phase and healing of the distressed tissue and minimizes the postoperative pain with reduced chances of inflammation.

The global market for continuous passive motion devices is anticipated to be driven by the increasing prevalence of diseases associated with joint replacement, trauma or ligament reconstruction and also with increasing number of aging population. The

growing concerns relating to health problems and the necessity to cure them is projected to drive the market in the forecast period. However, the critical reimbursement scenarios and the cost of the treatment are the factors that restrain the growth of continuous passive motion device market over the globe. The reliability, safe implication of the devices and wide range of medical application of continuous passive motion devices are the key drivers of the market.
