In 2025, global Continuous Vacuum Dryer production reached approximately 2,158 units, with an average global market price of around USD 165,000 per unit.

The gross profit margin of major companies in the industry is between 25%?38%.

In 2025, the global production capacity of Continuous Vacuum Dryer was approximately 2,800 units.

Continuous Vacuum Dryer is an industrial drying system designed to continuously remove moisture from heat-sensitive materials under vacuum conditions. By reducing boiling temperature and controlling drying atmosphere, it enables efficient drying while minimizing oxidation, thermal degradation, and quality loss. The equipment typically integrates vacuum chambers, heating systems, material conveying mechanisms, condensers, and process control units. It is mainly used in chemical processing, pharmaceuticals, food ingredients, specialty materials, and advanced manufacturing industries. The product boundary includes continuous vacuum drying equipment and integrated drying systems, excluding batch vacuum dryers and standalone vacuum pumps.

The continuous vacuum dryer industry chain includes upstream suppliers of stainless steel materials, heating components, vacuum equipment, sensors, control systems, and

mechanical parts; the midstream sector covers equipment design, fabrication, assembly, automation integration, and performance testing; the downstream sector includes pharmaceutical manufacturing, chemical processing, food production, battery materials, and specialty material industries. Market growth is driven by demand for energy-efficient drying technologies, higher product quality requirements, and automation in industrial processing.
