Abstracts

The global Contour Machine market size is expected to reach \$ 1248.4 million by 2030, rising at a market growth of 5.6% CAGR during the forecast period (2024-2030).

A contour machine is a machine tool for cutting sheet metal and steel. Also called a band saw, as the name implies, it can cut sheet metal and steel by rotating a band saw (a metal wheel with a saw blade).

The sheet metal or steel material is prescribed, and the workpiece is moved along the line and pressed against it as it is processed. A relatively small contour machine can process not only straight lines but also any desired shape, such as a rounded edge. Larger machines are designed to cut thicker steel materials, so they do not allow as much freedom in the cutting process.

This report studies the global Contour Machine production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Contour Machine, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2023 as the base year.
