A contour palette is a makeup product used to refine facial contours. By applying the principles of light and shadow, darker shades (shadows) visually shrink less desirable areas, while lighter shades (highlights) emphasize key features, creating a more sculpted bone structure on a 2D plane.

The core upstream raw materials for contour palettes include powders (mica, talc, silica, kaolin), colorants (iron oxide, inorganic pigments, matte/pearl powders), and additives (oils, waxes, binders, moisturizers, preservatives, and fixatives). Downstream sales channels are primarily online, supplemented by offline channels.

In 2025, global contour palette sales reached 241 million units, with a production capacity of approximately 295 million units. The average selling price was \$15.08 per unit, and the average gross profit margin was 63%-68%.
