Abstracts

According to our (Global Info Research) latest study, the global Control and Slow-release Fertiliser market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Control and Slow release fertilizer is a granulated fertilizer that releases nutrients gradually into the soil. The slowness of the release is determined by the low solubility of the chemical compounds in the soil moisture. Since conventional fertilizers are soluble in water, the nutrients can disperse quickly as the fertilizer dissolves. Because controlled and slow release fertilizers are not water-soluble, their nutrients disperse into the soil more slowly. The fertilizer granules may have an insoluble substrate or a semi-permeable jacket that prevents dissolution while allowing nutrients to flow outward.

In Europe, the top 5 players of Control and Slow-release Fertiliser have a share 21% of the market, including ICL, Haifa Group, SQMVITAS, OCI Nitrogen, Saviola Group, etc. In terms of type, Slow-release Fertiliser shares over 61% of the market, while Control-release Fertiliser shares 38%.
