According to our (Global Info Research) latest study, the global Controlled (Coated) Release Fertilizer market size was valued at USD 3841.8 million in 2023 and is forecast to a readjusted size of USD 5328.8 million by 2030 with a CAGR of 4.8% during review period.

Controlled-release fertilizer (CRF) is a granulated fertilizer that releases nutrients gradually into the soil (i.e., with a controlled release period). The slowness of the release is determined by the low solubility of the chemical compounds in the soil moisture. Since conventional fertilizers are soluble in water, the nutrients can disperse quickly as the fertilizer dissolves. Because controlled-release fertilizers are not water-soluble, their nutrients disperse into the soil more slowly. The fertilizer granules may have an insoluble substrate or a semi-permeable jacket that prevents dissolution while allowing nutrients to flow outward.

Global key players of controlled (coated) release fertilizer include Nutrien (Agrium), ICL, Anhui MOITH, Haifa Group, Harrell's, etc. The top five players hold a share about 39%. The global controlled (coated) release fertilizers are mainly produced in North America, Israel, Japan and China, they occupied for a share over 60%. Asia-Pacific is the largest market, has a share about 54%, followed by North America and Europe, with share 21% and 20%, separately.
