According to our (Global Info Research) latest study, the global Controlled-release Compound Fertilizer market size was valued at USD 209.5 million in 2023 and is forecast to a readjusted size of USD 248.8 million by 2030 with a CAGR of 2.5% during review period.

Controlled-release compound fertilizer is a granulated fertilizer that releases nutrients gradually into the soil (i.e., with a controlled release period). The slowness of the release is determined by the low solubility of the chemical compounds in the soil moisture. Since conventional fertilizers are soluble in water, the nutrients can disperse quickly as the fertilizer dissolves. Because controlled-release fertilizers are not water-soluble, their nutrients disperse into the soil more slowly. The fertilizer granules may have an insoluble substrate or a semi-permeable jacket that prevents dissolution while allowing nutrients to flow outward. Controlled-release fertilizers are also called coated or encapsulated fertilizers because the release is controlled by a polymer coating that contains a water-soluble fertilizer. Nutrients are released out of coated fertilizer through osmosis at a rate that is positively correlated with increased temperature.

The controlled-release compound fertilizer industry concentration is high; there are a few manufacturers in the world, and high-end products are mainly from Americas and Europe. In the world, giant manufactures mainly distribute in Americas and China such as ICL, Agrium, Kingenta and Haifa Chemicals. ICL is the leader of this industry by 31% market shaers.
