The global Controlled Release Enteric Softgel Capsules market size is expected to reach \$ 1366 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

Controlled release enteric softgel capsules are a type of pharmaceutical dosage form. They consist of a soft gelatin shell that is designed to be insoluble in the acidic environment of the stomach but soluble in the more alkaline environment of the small intestine. Inside the capsule, the active pharmaceutical ingredient is formulated in a way that allows for a controlled and sustained release over a specific period of time. This controlled - release mechanism helps to maintain a relatively stable drug concentration in the bloodstream, reduce the frequency of dosing, and minimize the potential side effects associated with rapid drug release or high - peak drug concentrations.
