Abstracts

According to our (Global Info Research) latest study, the global Controlled-Release Fertilizer market size was valued at USD 1497.1 million in 2023 and is forecast to a readjusted size of USD 1837.1 million by 2030 with a CAGR of 3.0% during review period.

Controlled-release fertilizer (CRF) is a granulated fertilizer that releases nutrients gradually into the soil (i.e., with a controlled release period). The slowness of the release is determined by the low solubility of the chemical compounds in the soil moisture. Since conventional fertilizers are soluble in water, the nutrients can disperse quickly as the fertilizer dissolves. Because controlled-release fertilizers are not water-soluble, their nutrients disperse into the soil more slowly. The fertilizer granules may have an insoluble substrate or a semi-permeable jacket that prevents dissolution while allowing nutrients to flow outward.

Global Controlled-Release Fertilizer key players include Agrium, Kingenta Ecological Engineering Group, Israel Chemicals Limited (ICL), Hanfeng Evergreen, Haifa Chemicals, etc. Global top five manufacturers hold a share over 70%.

Americas is the largest market, with a share over 35%, followed by EU and China, both have a share over 50%.
