The global Controlled-Release and Slow-Release Fertilizers market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Controlled-release and slow-release fertilizers are two types of fertilizers that release nutrients over an extended period of time. Both controlled-release and slow-release fertilizers have several advantages over conventional fertilizers, including reduced nutrient leaching, lower application rates, and improved plant growth and health. These fertilizers are particularly useful in agricultural and horticultural settings where it is important to maintain a consistent supply of nutrients for plant growth.

This report studies the global Controlled-Release and Slow-Release Fertilizers production, demand, key manufacturers, and key regions.
