Abstracts

The global Conventional GM Cryocooler Cold Heads market size is expected to reach $ 391 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032).

Conventional GM Cryocooler Cold Heads are the core cold-end assemblies that directly generate and deliver refrigeration in Gifford–McMahon cooling systems. A cold head is normally connected to a helium compressor through high- and low-pressure helium lines. The compressor supplies purified high-pressure helium, while the rotary valve, cylinder, displacer, regenerator, and cold-end heat exchangers inside the cold head operate cyclically to cool the helium through expansion and transfer refrigeration to a superconducting magnet, sample stage, cryopanel, or other thermal load. The standalone cold-head market includes cold heads delivered with new systems, independently sold cold heads, spare units, replacement units, and factory-refurbished or exchange units. It excludes helium compressors, helium lines, power controllers, complete cryopumps, complete cryostats, and other peripheral systems.

In 2025, global Conventional GM Cryocooler Cold Heads production reached approximately 18.7 k units, with an average global market price of around US$ 14.4 k per unit

The principal upstream materials include austenitic stainless steel for cylinders, housings, regenerator tubes, and vacuum-compatible structures; oxygen-free high-conductivity copper for cold-end heat exchangers, cold stages, and thermal links; aluminum alloys for lightweight components; engineering polymers, glass-fiber composites, and polyimide materials for displacers and thermally isolating structures; stainless-steel mesh, high-heat-capacity lead-based materials, and rare-earth

+357 96 030922
info@marketpublishers.com

intermetallic compounds for regenerators; and precision bearings, rotary valves, motors, seals, vacuum brazing materials, cryogenic coatings, and high-purity helium. Representative upstream suppliers include Outokumpu, Nippon Steel, and POSCO for stainless steel; Aurubis, Mitsubishi Materials, and KME for oxygen-free copper; TDK, Shin-Etsu Chemical, and Proterial for magnetic and rare-earth materials; Parker Hannifin and Trelleborg for sealing products; SKF, NSK, and Schaeffler for precision bearings; and Linde, Air Liquide, and Air Products for high-purity helium. These companies should be viewed as representative material and component suppliers rather than publicly confirmed direct suppliers to every cold-head manufacturer.

Downstream customers primarily comprise MRI and NMR equipment manufacturers, scientific-instrument and laboratory-cryostat manufacturers, cryopump and semiconductor-vacuum-equipment companies, and integrators of superconducting, gas-liquefaction, and specialized cryogenic systems. Representative MRI and NMR customers and system integrators include Siemens Healthineers, GE HealthCare, Philips, Canon Medical Systems, United Imaging, and Bruker. Scientific-instrument customers include Oxford Instruments, Quantum Design, Lake Shore, Janis, Bluefors, Oxford Cryosystems, universities, national laboratories, and research institutes. Cryopump and vacuum-system customers include Edwards Vacuum, ULVAC CRYOGENICS, SHI, Applied Materials, Lam Research, Tokyo Electron, Canon Anelva, and optical-coating-equipment manufacturers. Other potential customers include superconducting-cable and magnet manufacturers, helium-liquefaction equipment companies, industrial-gas suppliers, and aerospace research organizations. These names represent equipment manufacturers, integrators, or potential downstream customers and should not automatically be interpreted as publicly confirmed direct purchasers from every cold-head supplier.

The gross margin for Conventional GM Cryocooler Cold Heads is approximately 25%–45%.

By principal rated temperature or minimum operating temperature, the market is divided into Under 10K or 10K, 10.1K-30K, and Above 30K. For a two-stage cold head, classification should be based on the coldest rated stage; for a single-stage model, it should be based on the principal rated operating temperature. Under 10K or 10K products include 2K, 4K, and 10K cold heads, are generally based on two-stage architectures, carry relatively high technical barriers and unit values, and are principally used in MRI and NMR, superconducting magnets, helium recondensation, and low-temperature research. ULVAC offers cold heads with rated capacity at 4.2K, while SHI supplies 2K, 4K, and 10K product series. The 10.1K-30K segment mainly includes cold

+357 96 030922
info@marketpublishers.com

heads operating around 20K and combines relatively high cooling capacity with applications in hydrogen liquefaction, high-temperature superconductivity, research cryostats, and selected cryogenic-vacuum equipment. Bluefors' Cryomech GM portfolio primarily covers 20K-80K, while Oxford Cryosystems offers two-stage products rated around 20K. Above 30K products cover approximately 40K, 50K, 65K, 77K, and higher temperature ranges and are commonly used for cryopump radiation shields, higher-temperature condensation surfaces, high-temperature superconducting equipment, nitrogen and argon liquefaction, cryogenic traps, and high-heat-load precooling.

MRI and NMR primarily use two-stage cold heads in the Under 10K or 10K segment to conductively cool superconducting magnets or recondense helium. These systems require continuous operation, low failure rates, stable cooling capacity near 4.2K, and mature global service capabilities. Scientific Instruments and Laboratory Cryostats include materials-characterization systems, cryogenic optical platforms, superconductivity research, magnetotransport, Hall-effect measurements, quantum-device testing, and laboratory cryostats; these applications can use products from all three temperature categories depending on sample temperature and thermal load. Cryopumps and Vacuum Systems normally use surfaces around 10K-20K to condense nitrogen, oxygen, and argon, together with radiation shields and adsorption structures operating around 50K-80K, and principally serve semiconductor, flat-panel-display, optical-coating, and research-vacuum systems. Others include high-temperature superconducting cables and magnets, helium and hydrogen liquefiers, cryogenic traps, infrared and optoelectronic devices, cryogenic electronics, aerospace equipment, and specialized industrial cooling systems.

Leading suppliers include Sumitomo Heavy Industries (SHI) and ULVAC CRYOGENICS of Japan; Edwards Vacuum and Oxford Cryosystems of the United Kingdom; Bluefors (Cryomech) of Finland; Pengli Technology, Bwokai Technologies, Suzhou Bama Superconductive Technology, and Hynhe of China; and Advanced Research System of the United States. SHI offers a broad portfolio covering 2K, 4K, 10K, 20K, 40K, and 77K temperature ranges and has a strong presence in MRI, superconducting magnets, research, and industrial cryogenics. Edwards Vacuum and ULVAC CRYOGENICS have established positions in cryopumps and semiconductor vacuum equipment. Bluefors (Cryomech) emphasizes high-capacity 20K-80K products, scientific equipment, and gas-liquefaction applications. Pengli Technology has developed product series for liquid-helium temperatures, 20K-30K, and 77K. Bwokai Technologies supplies 4K cold heads, cryopumps, and cryogenic traps. Suzhou Bama offers products rated at 4.2K and 20K together with cryopump systems. Hynhe continues to expand its 4K and high-capacity GM portfolio. Advanced Research System focuses on laboratory cryostats, ultra-high-

+357 96 030922
info@marketpublishers.com

vacuum cold heads, and customized research platforms, while Oxford Cryosystems supplies single-stage and two-stage cold heads together with multidrive compressor configurations.

Market growth is supported by the transition of MRI and NMR equipment toward reduced-helium, recondensing, and higher-uptime architectures; expansion of quantum technology, superconductivity research, low-temperature materials testing, and cryogen-free laboratory systems; additional demand for cryopumps from semiconductor wafer fabrication, display manufacturing, optical coating, and vacuum heat-treatment equipment; development of high-temperature superconducting cables, magnetic levitation, superconducting motors, fusion research, and high-field magnets; helium price volatility and supply concerns that encourage hospitals and laboratories to adopt recondensing systems; growth in hydrogen energy and cryogenic-fuel infrastructure, creating opportunities for high-capacity products around 20K; localization of critical cryogenic equipment and supply chains in China and other regions; and an expanding installed base of MRI systems, cryopumps, and scientific instruments that generates recurring maintenance, replacement, and factory-refurbishment demand.

The market is constrained by demanding expertise in regenerative-cycle design, rare-earth regenerator materials, micron-level machining, low-wear seals, vacuum brazing, cryogenic coatings, and helium purification; high development, testing, and manufacturing-equipment costs; lengthy reliability validation and customer-qualification cycles in MRI, semiconductor, and major scientific equipment; periodic maintenance requirements associated with displacers, seals, and rotary valves; limited cross-brand interchangeability because cold heads must match compressor pressure, helium flow, operating frequency, hose interfaces, and control logic; performance deterioration caused by helium leakage, contamination, or excessive oil carryover; supply and cost volatility for oxygen-free copper, specialty stainless steel, precision bearings, sealing materials, and rare-earth regenerator compounds; electricity consumption, cooling-water or air-cooling requirements, noise, and equipment-space constraints; competition from pulse tube cryocoolers in low-vibration research applications; and continued use of liquid nitrogen, liquid helium, or other stored cryogens in applications with limited operating hours.

Report Scope

This report studies the global Conventional GM Cryocooler Cold Heads production, demand, key manufacturers, and key regions.

+357 96 030922
info@marketpublishers.com

This report is a detailed and comprehensive analysis of the world market for Conventional GM Cryocooler Cold Heads and provides market size (US$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Conventional GM Cryocooler Cold Heads that contribute to its increasing demand across many markets.

Highlights and key features of the study

Global Conventional GM Cryocooler Cold Heads total production and demand, 2021-2032, (Units)

Global Conventional GM Cryocooler Cold Heads total production value, 2021-2032, (USD Million)

Global Conventional GM Cryocooler Cold Heads production by region & country, production, value, CAGR, 2021-2032, (USD Million) & (Units), (based on production site)

Global Conventional GM Cryocooler Cold Heads consumption by region & country, CAGR, 2021-2032 & (Units)

U.S. VS China: Conventional GM Cryocooler Cold Heads domestic production, consumption, key domestic manufacturers and share

Global Conventional GM Cryocooler Cold Heads production by manufacturer, production, price, value and market share 2021-2026, (USD Million) & (Units)

Global Conventional GM Cryocooler Cold Heads production by Type, production, value, CAGR, 2021-2032, (USD Million) & (Units)

Global Conventional GM Cryocooler Cold Heads production by Application, production, value, CAGR, 2021-2032, (USD Million) & (Units)

This report profiles key players in the global Conventional GM Cryocooler Cold Heads market based on the following parameters - company overview, production, value, price, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include Sumitomo Heavy Industries (SHI),

+357 96 030922
info@marketpublishers.com

Edwards Vacuum LLC, ULVAC CRYOGENICS, Bluefors (Cryomech), Pengli Technology, Bwokai Technologies, Suzhou Bama Superconductive Technology, Hynhe, Advanced Research System, Oxford Cryosystems, etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Stakeholders would have ease in decision-making through various strategy matrices used in analyzing the World Conventional GM Cryocooler Cold Heads market

Detailed Segmentation:

Each section contains quantitative market data including market by value (US$ Millions), volume (production, consumption) & (Units) and average price (K US$/Unit) by manufacturer, by Type, and by Application. Data is given for the years 2021-2032 by year with 2025 as the base year, 2026 as the estimate year, and 2027-2032 as the forecast year.

Contents

1 SUPPLY SUMMARY

1.1 Conventional GM Cryocooler Cold Heads Introduction
1.2 World Conventional GM Cryocooler Cold Heads Supply & Forecast
  1.2.1 World Conventional GM Cryocooler Cold Heads Production Value (2021 & 2025 & 2032)
  1.2.2 World Conventional GM Cryocooler Cold Heads Production (2021-2032)
  1.2.3 World Conventional GM Cryocooler Cold Heads Pricing Trends (2021-2032)
1.3 World Conventional GM Cryocooler Cold Heads Production by Region (Based on Production Site)
  1.3.1 World Conventional GM Cryocooler Cold Heads Production Value by Region (2021-2032)
  1.3.2 World Conventional GM Cryocooler Cold Heads Production by Region (2021-2032)
  1.3.3 World Conventional GM Cryocooler Cold Heads Average Price by Region (2021-2032)
  1.3.4 North America Conventional GM Cryocooler Cold Heads Production (2021-2032)
  1.3.5 Europe Conventional GM Cryocooler Cold Heads Production (2021-2032)
  1.3.6 China Conventional GM Cryocooler Cold Heads Production (2021-2032)
  1.3.7 Japan Conventional GM Cryocooler Cold Heads Production (2021-2032)
1.4 Market Drivers, Restraints and Trends
  1.4.1 Conventional GM Cryocooler Cold Heads Market Drivers
  1.4.2 Factors Affecting Demand
  1.4.3 Conventional GM Cryocooler Cold Heads Major Market Trends

2 DEMAND SUMMARY

2.1 World Conventional GM Cryocooler Cold Heads Demand (2021-2032)
2.2 World Conventional GM Cryocooler Cold Heads Consumption by Region
  2.2.1 World Conventional GM Cryocooler Cold Heads Consumption by Region (2021-2026)
  2.2.2 World Conventional GM Cryocooler Cold Heads Consumption Forecast by Region (2027-2032)
2.3 United States Conventional GM Cryocooler Cold Heads Consumption (2021-2032)
2.4 China Conventional GM Cryocooler Cold Heads Consumption (2021-2032)
2.5 Europe Conventional GM Cryocooler Cold Heads Consumption (2021-2032)
2.6 Japan Conventional GM Cryocooler Cold Heads Consumption (2021-2032)

+357 96 030922
info@marketpublishers.com

2.7 South Korea Conventional GM Cryocooler Cold Heads Consumption (2021-2032)
2.8 ASEAN Conventional GM Cryocooler Cold Heads Consumption (2021-2032)
2.9 India Conventional GM Cryocooler Cold Heads Consumption (2021-2032)

3 WORLD MANUFACTURERS COMPETITIVE ANALYSIS

3.1 World Conventional GM Cryocooler Cold Heads Production Value by Manufacturer (2021-2026)
3.2 World Conventional GM Cryocooler Cold Heads Production by Manufacturer (2021-2026)
3.3 World Conventional GM Cryocooler Cold Heads Average Price by Manufacturer (2021-2026)
3.4 Conventional GM Cryocooler Cold Heads Company Evaluation Quadrant
3.5 Industry Rank and Concentration Rate (CR)
  3.5.1 Global Conventional GM Cryocooler Cold Heads Industry Rank of Major Manufacturers
  3.5.2 Global Concentration Ratios (CR4) for Conventional GM Cryocooler Cold Heads in 2025
  3.5.3 Global Concentration Ratios (CR8) for Conventional GM Cryocooler Cold Heads in 2025
3.6 Conventional GM Cryocooler Cold Heads Market: Overall Company Footprint Analysis
  3.6.1 Conventional GM Cryocooler Cold Heads Market: Region Footprint
  3.6.2 Conventional GM Cryocooler Cold Heads Market: Company Product Type Footprint
  3.6.3 Conventional GM Cryocooler Cold Heads Market: Company Product Application Footprint
3.7 Competitive Environment
  3.7.1 Historical Structure of the Industry
  3.7.2 Barriers of Market Entry
  3.7.3 Factors of Competition
3.8 New Entrant and Capacity Expansion Plans
3.9 Mergers, Acquisition, Agreements, and Collaborations

4 UNITED STATES VS CHINA VS REST OF THE WORLD

4.1 United States VS China: Conventional GM Cryocooler Cold Heads Production Value Comparison
  4.1.1 United States VS China: Conventional GM Cryocooler Cold Heads Production

5 MARKET ANALYSIS BY TYPE

5.1 World Conventional GM Cryocooler Cold Heads Market Size Overview by Type: 2021 VS 2025 VS 2032
5.2 Segment Introduction by Type
  5.2.1 Under 10K or 10K
  5.2.2 10.1K-30K
  5.2.3 Above 30K
5.3 Market Segment by Type
  5.3.1 World Conventional GM Cryocooler Cold Heads Production by Type (2021-2032)
  5.3.2 World Conventional GM Cryocooler Cold Heads Production Value by Type (2021-2032)
  5.3.3 World Conventional GM Cryocooler Cold Heads Average Price by Type (2021-2032)

6 MARKET ANALYSIS BY NUMBER OF COOLING STAGES

6.1 World Conventional GM Cryocooler Cold Heads Market Size Overview by Number of Cooling Stages: 2021 VS 2025 VS 2032
6.2 Segment Introduction by Number of Cooling Stages
  6.2.1 Single-Stage Gifford-McMahon Cryocooler Cold Head
  6.2.2 Two-Stage Gifford-McMahon Cryocooler Cold Head
6.3 Market Segment by Number of Cooling Stages
  6.3.1 World Conventional GM Cryocooler Cold Heads Production by Number of Cooling Stages (2021-2032)
  6.3.2 World Conventional GM Cryocooler Cold Heads Production Value by Number of Cooling Stages (2021-2032)
  6.3.3 World Conventional GM Cryocooler Cold Heads Average Price by Number of Cooling Stages (2021-2032)

7 MARKET ANALYSIS BY END-USE INDUSTRY

7.1 World Conventional GM Cryocooler Cold Heads Market Size Overview by End-Use Industry: 2021 VS 2025 VS 2032
7.2 Segment Introduction by End-Use Industry
  7.2.1 Semiconductor and Electronic Device Manufacturing
  7.2.2 Medical and Life Sciences
  7.2.3 Research and Development

+357 96 030922
info@marketpublishers.com

7.2.4 Energy and Superconducting Technology
7.2.5 Industrial Gases and Cryogenic Processing
7.2.6 Others
7.3 Market Segment by End-Use Industry
7.3.1 World Conventional GM Cryocooler Cold Heads Production by End-Use Industry (2021-2032)
7.3.2 World Conventional GM Cryocooler Cold Heads Production Value by End-Use Industry (2021-2032)
7.3.3 World Conventional GM Cryocooler Cold Heads Average Price by End-Use Industry (2021-2032)

8 MARKET ANALYSIS BY APPLICATION

8.1 World Conventional GM Cryocooler Cold Heads Market Size Overview by Application: 2021 VS 2025 VS 2032
8.2 Segment Introduction by Application
8.2.1 MRI and NMR
8.2.2 Scientific Instruments and Laboratory Cryostats
8.2.3 Cryopumps and Vacuum Systems
8.2.4 Others
8.3 Market Segment by Application
8.3.1 World Conventional GM Cryocooler Cold Heads Production by Application (2021-2032)
8.3.2 World Conventional GM Cryocooler Cold Heads Production Value by Application (2021-2032)
8.3.3 World Conventional GM Cryocooler Cold Heads Average Price by Application (2021-2032)

I would like to order

Product name: Global Conventional GM Cryocooler Cold Heads Supply, Demand and Key Producers, 2026-2032

Product link: https://marketpublishers.com/r/G0EA3B2CE903EN.html

Price: US$ 4,480.00 (Single User License / Electronic Delivery)

If you want to order Corporate License or Hard Copy, please, contact our Customer Service:
info@marketpublishers.com

Payment

To pay by Credit Card (Visa, MasterCard, American Express, PayPal), please, click button on product page https://marketpublishers.com/r/G0EA3B2CE903EN.html
