According to our (Global Info Research) latest study, the global Converged Network Services market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Converge network services also known as media convergence provides data communication, video, and telephone services on a single network, aiding in convenience and flexibility which is difficult to achieve through separate infrastructures. Network service providers earlier were using number of hardware, networks, and protocols to connect to servers, but with the aid of converged network services users can avail number of services such as internet browsing, texting, voice over internet, video conferencing etc. with the aid of a single infrastructure offering advantages including improved quality of service at a moderate cost and enhanced protection against malware. Standardization on Ethernet, Wi-Fi, and TCP/IP aids the service network providers in integrating disparate vendors and products, making network management relatively easier for IT administrators.

Converged network services offer a number of advantages such as low cost of services offered, lower investment involved in the implementation, lower maintenance cost etc. and these advantages are expected to drive the demand for converged network services. Other factors supporting the growth of converged network services include requirement to upgrade obsolete datacentres, growing cloud services, growing IoT market etc.
