According to our (Global Info Research) latest study, the global Conversational Interface Agents Software market size was valued at US\$ 364 million in 2025 and is forecast to a readjusted size of US\$ 542 million by 2032 with a CAGR of 6.1% during review period.

Conversational interface agents enable organizations to deploy AI agents that act as an intelligent front door to business systems. These agents allow users to interact with software, data, and workflows using natural language or voice instead of navigating complex menus, forms, or dashboards. Organizations use conversational interface agents to reduce friction in digital workflows, improve access to information, and accelerate task completion. Rather than requiring users to understand how systems are structured, these agents interpret user intent, determine appropriate next steps, and retrieve information or initiate actions on the user's behalf.
