Abstracts

Usually, the keys on the membrane switch only use color to express the position, shape and size of the key body. In this way, the accuracy of the operation can only be recognized by the operator's vision. Because there is no appropriate feedback information, the confidence in machine monitoring and the speed of operation are affected. Therefore, it is necessary to make arrangements in the design stage of the panel, and prepare process holes for precise positioning during mold pressing. The height of the three-dimensional protrusions should generally not exceed twice the thickness of the base material. For the aesthetic appearance of the product, the protrusions of the convex membrane switch can be made in many variations.
