## Abstracts

The global Conveyor for Plastic market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

In many contexts, industrial conveyor systems are used for little more than transferring a product or material from point A to point B. For some applications, though, conveyor systems are integral to the production process, providing a tool that's essential to how a new product takes shape. Parts cooling and drying conveyors in the plastics industry are a great example of the latter. Plastic products often require high heat to be manufactured; this means they also need time and space to cool off, preferably as quickly as possible. In other cases, products might need time to dry off after paint or other coatings or applied. This is where cooling and drying conveyors become necessary.
