## Abstracts

According to our (Global Info Research) latest study, the global Conveyor Belt Fabrics market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Conveyor belts are integral components of a conveyor system, and are used to physically transport bulk materials from one place to another in an incessant motion. Conveyor belt fabric is a type of material used in conveyor belts, which must be long lasting, durable and resistant to a comprehensive range of moisture, temperature and chemicals. Conveyor belts are manufactured out of many different materials, all with differing specifications, properties and benefits. Moreover, fabric conveyor belts are used to transport heavy abrasive materials such as rock, ore or gravel, which create hefty need of conveyor belt fabrics. In conveyor belt fabric, special fabric weaves are also presented for applications requiring high flex and high anti-tear properties. There is a wide range of belting fabrics available in the market that are used as reinforcement material inside the conveyor belts. Processed in multiple layers inside the conveyor belts, the belting fabrics are required to be resilient and offer requisite strength. The covering fabric of heavy duty conveyor belts primarily used and the skeleton material is steel wire, nylon, etc. Heavy duty conveyor belts are extensively used in the coal, steel, electricity, cement, building materials, mining, and other industries, excessive use of conveyor belts fabric for such industries escalates the market growth.

Accelerating demand of conveyor belt fabric is the reason of growing high industrial investment in all the regions. The qualities of conveyor belt fabric are profoundly dependent on its rigidity and strength, which increase its workability withstand the high pressure. Macroeconomic factors, such as GDP growth, are among major growth

drivers for the conveyor belt fabric market. Evolution in infrastructure activities of airports, buildings, malls and others are also among the foremost factors driving the growth of the conveyor belt fabric market. Heavy duty conveyor belts have rigid fabric in order to handle high pressure, so in big infrastructure projects need of these type of conveyor fabricated belts is intensified. According to ISO (International Standard Organization) special rubber layer with good fabric adhesion properties are the best fabricated material for conveyor belt. These standard leads industries to focus towards using of conveyor belt fabric for gaining adhesion properties. Economic slowdown in the European region and some of the Middle East countries, may act as a restraining factor for the conveyor belt fabric market.
