The global Conveyor and Drive Belt market size is expected to reach \$ 18820 million by 2032, rising at a market growth of 2.5% CAGR during the forecast period (2026-2032).

The Conveyor belt is an endless band that transfers the material conveyed between two points. A conveyor belt is comprised of a reinforced member, or carcass, and a protective covering. Conveyor belts are generally a composite of rubber or some elastomer such as PVC and fabric or some other reinforcement. The elastomer is the external covering which provides wear ability and protection from the handling environment. The fabric carcass internally serves as the strength bearing member for supporting the load and to control stretching of the belt.
