According to our (Global Info Research) latest study, the global Cool Chain market size was valued at USD 286030 million in 2023 and is forecast to a readjusted size of USD 525960 million by 2030 with a CAGR of 9.1% during review period.

Cold chain is defined as the series of actions and equipment applied to maintain a product within a specified low-temperature range from harvest/production to consumption.

This growth is mainly driven by the rising demand for temperature-controlled storage and transportation in various industries such as food, pharmaceuticals, and chemicals. The globalization of trade has led to an increase in the movement of goods across borders. This is driving the need for cold chain logistics to ensure that temperature-sensitive products are maintained at the required temperature during transport and storage, regardless of distance and time. The outbreak has further highlighted the importance of the cold chain market, especially in the delivery of vaccines and other medical supplies. Therefore, the market is expected to continue to grow in the coming years, requiring significant investments in technology and infrastructure to improve cold chain logistics and ensure safe and efficient distribution of temperature-sensitive products.
