According to our (Global Info Research) latest study, the global Cooling Condensation Atmospheric Water Generator (AWG) market size was valued at USD 3449 million in 2023 and is forecast to a readjusted size of USD 9404.6 million by 2030 with a CAGR of 15.4% during review period.

A condensate atmospheric water generator is a device that extracts moisture from the atmosphere, cools it, condenses it, and ultimately converts it into liquid water. This type of equipment is widely used in some dry areas or places with scarce water resources to solve basic needs such as drinking water and irrigation.

AWG technology utilizes a cooling condensation process to produce drinking water and can be used in a wide range of commercial, residential and industrial applications. app. Technological advancements in reducing device cost and power consumption are expected to drive market expansion.

The need for safe and reliable access to drinking water is growing steadily as customers become increasingly concerned about the presence of contaminants. In addition, due to water scarcity, it is inconvenient for residents to obtain continuous water supply thereby driving the consumption of bottled water around the world. Cooled condensing air water generators can help solve these problems by providing a chemical-free and reliable source of water, reducing dependence on bottled water, thus contributing to market growth.
