Cooling Equipment refers to a range of mechanical or thermodynamic systems used to remove heat from equipment, industrial processes, buildings, or electronic systems in order to maintain proper operating temperature, improve efficiency, ensure safety, and extend equipment service life. Cooling equipment typically works through air cooling, water cooling, refrigerant-based cooling, or evaporative cooling, and commonly includes chillers, cooling towers, air coolers, heat exchangers, and refrigeration systems. These systems are widely used in industrial manufacturing, HVAC systems, data centers, power generation, transportation, and electronics.

The upstream of cooling equipment includes compressors, heat exchangers, fans, pumps, copper tubes, aluminum materials, refrigerants, control systems, sensors, and electronic components. Midstream manufacturers produce chillers, cooling towers, air cooling systems, and integrated cooling units. The downstream mainly includes industrial manufacturing, HVAC systems, data centers, power plants, transportation, petrochemical industry, and electronics industry, where cooling systems are essential for temperature control and equipment reliability.
