Cooling modules for electronic products are specialized components or systems designed to regulate and dissipate heat generated by electronic devices.

These cooling modules play a crucial role in maintaining the optimal operating temperature of electronic components, preventing overheating and ensuring the reliability and performance of the electronic products. Cooling modules often incorporate fans and heat sinks. Fans help in the circulation of air to dissipate heat from electronic components, while heat sinks are designed to absorb and transfer heat away from the components. They are commonly used in desktop computers, servers, and other electronics with moderate to high heat generation.
