Abstracts

The global Cooling Nylon Yarn market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Cooling nylon yarn is a type of yarn made from nylon fibers that have been treated or engineered to have cooling properties. The yarn is designed to wick away moisture, allowing for better breathability and heat dissipation, resulting in a cooler and more comfortable fabric. Cooling nylon yarns often incorporate advanced moisture management technologies or additives that help to quickly absorb and spread moisture across the fabric, enhancing the evaporative cooling effect. This can be beneficial in various applications where heat regulation and comfort are important, such as in activewear, sportswear, athletic apparel, and other garments subjected to intense physical activity or warm climates.

This report studies the global Cooling Nylon Yarn production, demand, key manufacturers, and key regions.
