The Coordinate Measuring Machine (CMM) monitor is a device used to monitor the performance and accuracy of CMM. Coordinate measuring machines are used in manufacturing and quality control applications to measure the dimensions and geometric shapes of complex components. CMM monitors typically consist of computer systems and software used to analyze the data collected by CMM. The monitor is used to track the performance of CMM over time and identify any issues or issues that may affect measurement accuracy. The software used in CMM monitors typically includes a series of tools and functions aimed at helping operators optimize the performance of CMM. This can include tools for calibrating CMM, analyzing measurement data, and identifying trends or patterns in the data that may indicate CMM issues.
