Abstracts

According to our (Global Info Research) latest study, the global Copolyester Elastomer market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Copolyester elastomer is a synthetic rubber consisting of hard polyester crystallites dispersed in a flexible matrix. Copolyester elastomers are thermoplastic. They are used in a variety of applications such as tires and automotive parts. They provide resistance to heat, fuel, oil and chemicals. They are block copolymers in nature. They have physical and chemical properties similar to vulcanized rubbers. Other applications include hose and tubing, cable and wire among others. These elastomers do not require compounding thus eliminating the addition of reinforcing agents or cure systems.

Thermoplastic polyester elastomer is a physical mix of polymers which consist of materials which possess both thermoelastic and elastomeric properties. Copolyester elastomers help in increasing the fuel efficiency by reducing the overall weight of the automobiles. Thus, growing demand for fuel efficient automobiles is expected to drive the demand for these elastomers within the forecast period. These elastomers have excellent tensile strength, abrasion resistance and electrical properties. In addition, they have resistance to chemicals and oil. This increases their utility in various industries. Additionally, shift towards replacing polyvinyl chloride (PVC) with copolyester and other elastomers are expected to drive the copolyester market. However, fluctuation in the raw material prices is expected to hamper the demand for copolyester elastomer within the forecast period. Ongoing research and development on copolyester elastomers for medical applications is expected to open avenues for these elastomers.
