According to our (Global Info Research) latest study, the global Copolymer of Maleic and Acrylic Acid market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Maleic acid-acrylic acid copolymer is a low-molecular-weight polyelectrolyte, which is prepared by copolymerizing maleic acid and acrylic acid in a certain proportion. MA/AA has a strong dispersing effect on carbonate, etc., and has high thermal stability. It is used under harsh conditions such as 300°C high temperature, and has good compatibility and synergistic effect with other water treatment chemicals. It has a good inhibitory effect on the formation of scale including phosphate. Due to its excellent anti-scale performance and high temperature resistance, MA/AA is widely used in low-pressure boilers, central heating, central air-conditioning and various circulating cooling water systems. MA/AA can also be used as a chelating dispersant in the textile printing and dyeing industry.
