## Abstracts

The global Copper Aluminum Brazing Wire market size is expected to reach \$ 24.42 million by 2032, rising at a market growth of 4.5% CAGR during the forecast period (2026-2032).

Copper-aluminum brazing wire is a metallic wire-form filler material composed of copper, aluminum, and small amounts of alloying elements. When used in conjunction with a flux, it enables high-strength brazing between copper and aluminum at elevated temperatures. It is widely utilized in metal joining processes for applications such as heat sinks, air conditioning systems, automotive cooling systems, and electronic devices.

Upstream: Suppliers of copper, aluminum, and alloy powders, as well as fluxes and packaging materials, provide the necessary raw materials. Downstream: Manufacturers of heat sinks, air conditioning and refrigeration systems, automotive cooling systems, electronic devices, and industrial piping utilize copper-aluminum brazing wire for welding and assembly, thereby constituting the market for finished and semi-finished products. Globally, the average unit price for copper-aluminum brazing wire stands at \$16,052 per ton, with an annual sales volume of approximately 1,086 tons; the global production capacity is 1,200 tons, and the industry profit margin is 12%.
