According to our (Global Info Research) latest study, the global Copper Anti-tarnish Agent market size was valued at US\$ 324 million in 2025 and is forecast to a readjusted size of US\$ 499 million by 2032 with a CAGR of 6.3% during review period.

In 2025, global sales volume of Copper Anti-tarnish Agent was approximately 35,000 tons, with an average global market price of about USD 9/kg. The gross margin of major producers in the industry was generally around 25%-45%.

Copper Anti-tarnish Agent is a functional surface treatment chemical used to prevent oxidation, sulfidation, corrosion and discoloration on copper and copper alloy surfaces. It typically forms a thin protective film on red copper, brass, bronze, copper-plated layers, copper foil and copper wire through organic complexation-adsorption, inorganic conversion film formation, silane coupling film formation, organic sealing film formation or composite synergistic protection, thereby delaying the erosion of copper surfaces caused by air, moisture, sulfides, salt spray and thermal environments, while maintaining color, electrical conductivity, solderability and appearance stability.

The downstream applications of Copper Anti-tarnish Agent mainly include electronic and electrical, transportation, architectural decoration, consumer product, industrial manufacturing, aerospace and other fields. Its value is mainly concentrated in formulation stability, film uniformity, environmentally friendly chromium-free technology, customer process adaptability and long-term protection performance.
