## Abstracts

According to our (Global Info Research) latest study, the global Copper-beryllium (CuBe) for Connectors market size was valued at US\$ 252 million in 2025 and is forecast to a readjusted size of US\$ 337 million by 2032 with a CAGR of 4.1% during review period.

Copper-Beryllium (CuBe) for connectors is a beryllium-containing copper alloy used in critical electronic connector components such as springs, pins, terminals, and micro-contacts. It combines high strength, excellent elasticity, wear resistance, and good electrical conductivity, meeting the demands of high-frequency, high-speed, and high-reliability applications. CuBe can be processed into strips, rods, or wires and further enhanced through heat treatment and surface finishing to improve hardness and spring life. This material is widely used in telecommunications, automotive, aerospace, and precision electronics industries, providing durable and reliable connector performance.

In 2025, the global production of copper-beryllium (CuBe) for connectors reached 5,825 tons, with an average selling price of \$42/kg and a production capacity of approximately 10,000 tons. The industry gross margin was around 30%–40%. Cost structure: direct materials accounted for about 86%, manufacturing overhead about 12%, and labor costs about 2%. Industry chain: upstream consists of copper, beryllium, and alloy additives; downstream includes electronics, telecommunications, automotive, aerospace, and precision manufacturing industries.
