## Abstracts

The global Copper-Chromite Catalysts market size is expected to reach \$ 27.58 million by 2032, rising at a market growth of 3.9% CAGR during the forecast period (2026-2032).

Copper-chromium catalyst is a black, powdery, non-metallic oxide inorganic functional material, belonging to the category of high-efficiency heterogeneous hydrogenation catalysts. It possesses excellent acid and alkali resistance, conductivity, and high catalytic activity, and is widely used in organic synthesis such as aldehyde and ketone hydrogenation, vegetable oil reduction, and nitrobenzene hydrogenation to aniline, as well as in industries such as solid propellant combustion rate control.

The upstream supply chain of copper-chromium catalysts mainly relies on the basic mining and inorganic salt industries. The core raw materials include copper nitrate, chromium nitrate, or ammonium dichromate, and their prices are significantly affected by fluctuations in global copper and chromium metal prices. Due to the heavy metal control regulations surrounding chromium compounds, environmental compliance qualifications and clean production technologies constitute significant barriers to entry in this industry.

Global sales are projected to be approximately 1,300 tons in 2025, with an average market price of approximately US\$15,800 per ton. The industry's gross profit margin is expected to be in the range of 20%-35%.

This report studies the global Copper-Chromite Catalysts production, demand, key manufacturers, and key regions.
