## Abstracts

The global Copper Clad Aluminum Sheet market size is expected to reach \$ 2187 million by 2032, rising at a market growth of 4.2% CAGR during the forecast period (2026-2032).

Copper Clad Aluminum (CCA) sheet is a high-performance bimetallic composite consisting of an aluminum core bonded to an outer layer of high-purity copper. Produced through cladding processes like cold-rolling or explosive bonding, it achieves a permanent metallurgical bond. This material integrates copper's superior electrical conductivity and corrosion resistance with aluminum's lightweight and cost-effective properties. It serves as a critical strategic alternative in power distribution, battery manufacturing, and heat dissipation, effectively reducing total component weight and material expenses.

In 2025, global production of Copper Clad Aluminum Sheet reached 315.4 k tons, with an average price of USD 5,047 per ton. Total production capacity was approximately 500 k tons, and the industry gross margin was around 10%-20%.

Cost structure: direct materials accounted for about 80%, manufacturing overhead about 15%, and labor costs about 5%.

Industry chain: upstream consists of raw material suppliers such as copper sheets and aluminum sheets, while downstream includes industries such as power, new energy, and electronic information.

This report studies the global Copper Clad Aluminum Sheet production, demand, key manufacturers, and key regions.
