## Abstracts

According to our (Global Info Research) latest study, the global Copper Clad Aluminum Sheet market size was valued at US\$ 1638 million in 2025 and is forecast to a readjusted size of US\$ 2187 million by 2032 with a CAGR of 4.2% during review period.

Copper Clad Aluminum (CCA) sheet is a high-performance bimetallic composite consisting of an aluminum core bonded to an outer layer of high-purity copper. Produced through cladding processes like cold-rolling or explosive bonding, it achieves a permanent metallurgical bond. This material integrates copper's superior electrical conductivity and corrosion resistance with aluminum's lightweight and cost-effective properties. It serves as a critical strategic alternative in power distribution, battery manufacturing, and heat dissipation, effectively reducing total component weight and material expenses.

In 2025, global production of Copper Clad Aluminum Sheet reached 315.4 k tons, with an average price of USD 5,047 per ton. Total production capacity was approximately 500 k tons, and the industry gross margin was around 10%-20%.

Cost structure: direct materials accounted for about 80%, manufacturing overhead about 15%, and labor costs about 5%.

Industry chain: upstream consists of raw material suppliers such as copper sheets and aluminum sheets, while downstream includes industries such as power, new energy, and electronic information.
