According to our (Global Info Research) latest study, the global Copper Clad Molybdenum market size was valued at US\$ 882 million in 2025 and is forecast to a readjusted size of US\$ 1255 million by 2032 with a CAGR of 5.3% during review period.

In 2025, global Copper Clad Molybdenum production reached approximately 6,350 tons, with an average global market price of around US\$135 per kilogram. Copper Clad Molybdenum materials are metal-matrix composite materials based on molybdenum and copper. They are typically produced through copper infiltration into a porous molybdenum skeleton, powder metallurgy, rolling cladding, or diffusion bonding, and are supplied as MoCu composites, Cu-Mo-Cu laminates, Cu-MoCu-Cu laminates, sheets, plates, heat spreaders, heat sinks, substrates, and precision-machined parts. These materials combine a relatively low coefficient of thermal expansion with high thermal conductivity, dimensional stability, plating compatibility, and good machinability, making them suitable for RF and microwave devices, power semiconductors, optoelectronic packages, laser diodes, automotive electronics, and high-reliability electronic packaging.

The global copper clad molybdenum market features a multi-regional competitive landscape, with America, Japanese, and Chinese companies holding major market shares. Leading players establish competitive advantages through long-term technological accumulation and consistent product quality. Industry technological development focuses on material performance optimization and manufacturing process upgrading, with products evolving toward ultra-thin, high-precision, and multi-layer composite structures. Adjusting molybdenum-copper ratios achieves precise matching of thermal expansion coefficients with downstream materials while enhancing thermal

conductivity, electrical conductivity, and mechanical strength. Downstream application demand serves as the core driver of market growth, with rising demand for efficient thermal management materials in semiconductor packaging, high-power electronic devices, aerospace equipment, and new energy vehicles expanding the application scope of copper clad molybdenum. Raw material supply stability and price fluctuations directly impact industry cost structures, with molybdenum and copper market changes transmitting through the entire industrial chain. Chinese domestic enterprises have made significant progress in technology research and production capacity construction, with product quality gradually reaching international advanced levels and export scales expanding continuously.
