## Abstracts

According to our (Global Info Research) latest study, the global Copper End Electrode Paste for MLCC market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Chip multilayer ceramic capacitors (MLCC) are mainly composed of three parts: internal electrodes, ceramic layers and terminal electrodes (end electrodes). Copper paste is a common used for MLCC end electrode.

MLCC uses copper terminal electrode paste to prepare terminal electrodes, and the paste is applied to both ends of the chip through a dip-sealing process. However, as the market demand for miniaturization of MLCC becomes stronger and stronger, using the dip-sealing process to apply copper terminal electrode slurry on the terminals of smaller specifications of products will cause uneven terminals, so the latest technology mostly uses screen printing technology.
