Copper Flat Rolled Products are semi-finished wrought copper and copper alloy materials produced by hot and cold rolling processes. These products leverage coppers exceptional electrical conductivity, thermal conductivity, corrosion resistance, and formability. In 2025, global copper flat rolled products production reached approximately 4,687K ton, with an average global market price of around USD 11,500 per ton. A factory gross profit of USD 3,220 per ton with 28% gross margin. A single line full machine capacity production is around 30K ton per line per year. The upstream is dependent on copper mining, smelting expansion and scrap copper recovery. The downstream demand is concentrated in electronics, construction and telecommunications. Precision rolled copper strip is used as battery busbars, current collectors and high voltage connector systems in EV battery. China growth is driven by Electric Vehicle (EV) production, large-scale electronics manufacturing, and rapid renewable energy infrastructure build-out. Japan and South Korea highly advanced semiconductor, electronics, and automotive parts manufacturing.
