Abstracts

The global Copper Gluconate market size is expected to reach \$ 79.69 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032).

Copper gluconate is a light blue to blue-green crystalline powder, commonly used as a highly effective and safe copper supplement and food fortifier. It has excellent water solubility and is widely used in the food and pharmaceutical industries for its efficient copper supplementation, aiding iron absorption, promoting red blood cell production, and maintaining bone and collagen health.

The core upstream raw materials are glucose (usually derived from corn starch processing) and high-purity copper sources. Glucose is converted into gluconic acid (or its lactone) through fermentation by microorganisms such as *Aspergillus niger*, which is a key factor determining cost.

Global sales in 2025 were approximately 6,700 tons, with an average market price of approximately US\$8,300 per ton. The industry's gross profit margin is in the range of 30-40%.

As an organic acid salt, copper gluconate has become an important copper source for dietary supplements, high-end infant formula, and functional personal care products due to its superior intestinal tolerance and extremely high cellular absorption rate compared to inorganic copper (such as copper sulfate). With consumers' deepening understanding of the mechanisms of 'cellular-level anti-oxidation' and 'accelerated collagen synthesis,' the industry is shifting its focus towards ultrafine grinding technology and high-purity crystal control processes to meet the stringent requirements of downstream industries for solubility and biostability.

This report studies the global Copper Gluconate production, demand, key manufacturers, and key regions.
