## Abstracts

The global Copper Heat Sink market size is expected to reach \$ 2069 million by 2032, rising at a market growth of 3.6% CAGR during the forecast period (2026-2032).

Copper heat sink is necessary due to the greater level of thermal conductivity one can achieve with it. In fact, copper conducts two times the amount of thermal energy as aluminum, making it an extremely desirable substance for heatsink production. Copper is able to be refined as a heatsink, put through die-casting and even bound together in the form of plates. There are two heat sink types: active and passive. Active Heat Sinks are those that have some kind of air mover on them. This might be a fan or blower, and generally it is attached in some way to the heat sink. The air move provides local air helping to cool down a semiconductors hot spot. Many active heat sinks are often seen cooling high end graphics processors (GPUs) on graphics boards. The performance of this kind of heat sink is high.

Global Copper Heat Sink key players include Delta, TE Connectivity, Aavid Thermalloy, etc. Global top three manufacturers hold a share over 10%.

China is the largest market, with a share over 45%, followed by Europe, and North America, both have a share about 30 percent.

In terms of product, Active Heat Sink is the largest segment, with a share over 55%. And in terms of application, the largest application is Industrial PCs, followed by LED Lighting, Servers, Automobile, etc.

This report studies the global Copper Heat Sink production, demand, key manufacturers, and key regions.
