Abstracts

According to our (Global Info Research) latest study, the global Copper Heatsink market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

This report studies the Copper Heat Sink market, copper heat sink is necessary due to the greater level of thermal conductivity one can achieve with it. In fact, copper conducts two times the amount of thermal energy as aluminum, making it an extremely desirable substance for heatsink production. Copper is able to be refined as a heatsink, put through die-casting and even bound together in the form of plates. There are two heat sink types: active and passive. Active Heat Sinks are those that have some kind of air mover on them. This might be a fan or blower, and generally it is attached in some way to the heat sink. The air move provides local air helping to cool down a semiconductors hot spot. Many active heat sinks are often seen cooling high end graphics processors (GPUs) on graphics boards. The performance of this kind of heat sink is high.

The Global Info Research report includes an overview of the development of the Copper Heatsink industry chain, the market status of Servers (Passive Heat Sink, Active Heat Sink), Automobile (Passive Heat Sink, Active Heat Sink), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Copper Heatsink.
