Abstracts

According to our (Global Info Research) latest study, the global Copper Infused Sheets market size was valued at US\$ 264 million in 2025 and is forecast to a readjusted size of US\$ 455 million by 2032 with a CAGR of 8.1% during review period.

Copper Infused Sheets refer to functional planar textile or film substrates where metallic copper, copper oxide, or ionic copper is integrated via masterbatch melt-spinning, padding, or vacuum coating techniques. The core attribute of this category is the utilization of copper's ionic release mechanism to grant the substrate broad-spectrum antimicrobial, odor control, and thermoregulatory properties. In 2025, global copper infused sheets production reached approximately 5,127 Ton, with an average global market price of around USD 50,000 per ton. A factory gross profit of USD 14,000 per ton with 28% gross margin. A single line full machine capacity production is around 1,500 ton per line per year. The upstream is dependent on copper supply, electroplating chemical and conductive chemical production. The downstream demand is concentrated in electronics, healthcare and automotive. Copper infused hospital sheets are used in intensive care units and long-term care facilities to reduce microbial contamination risks on high-contact textile surfaces. Japan and South Korea leads driven by high tech electronics. China also leads driven by massive raw material supply and massive hospital infrastructure.
