According to our (Global Info Research) latest study, the global Copper market size was valued at US\$ 250020 million in 2024 and is forecast to a readjusted size of USD 273750 million by 2031 with a CAGR of 1.3% during review period.

Copper is one of the oldest metals ever used and has been one of the important materials in the development of civilization. Because of its properties, singularly or in combination, of high ductility, malleability, and thermal and electrical conductivity, and its resistance to corrosion, copper has become a major industrial metal, ranking third after iron and aluminum in terms of quantities consumed.

The copper market is a global market where participants trade in the commodity of copper, which is a non-ferrous metal extensively used in electrical wiring, construction, and various industrial applications due to its high electrical and thermal conductivity. The market for copper is influenced by a wide range of factors including supply and demand dynamics, geopolitical events, economic trends, and environmental policies. Copper is extracted from copper ores through mining operations, which can be either open-pit or underground. The largest copper-producing countries include Chile, Peru, China, the United States, and Australia. As a key material in electrical and electronic products, copper demand is strongly linked to industrial activity and manufacturing output. Construction sectors use copper for wiring, plumbing, and roofing, which contributes to the demand for the metal. Large-scale infrastructure projects, including those related to renewable energy, transportation, and communication, can significantly impact copper demand. Environmental regulations can affect mining operations, possibly reducing the supply of copper. There is an increasing trend towards sustainable and ethical mining practices, which might impact the cost and availability of copper. As an industrial metal, copper is often seen as a barometer for global economic

health. An improving global economy generally increases demand for copper. The outlook for the copper market depends on a balance of these factors. Expectations around technological advancements (such as electric vehicles and renewable energy infrastructure), global economic growth, and shifts in trade policies can influence the future demand for copper. Investors monitor the copper market closely as part of their broader investment strategies, considering it both as a proxy for global economic conditions and as a direct investment opportunity through futures contracts, stocks of copper-producing companies, or physical copper trading.
