Copper metal grid touch sensor is an advanced touch technology that uses copper metal grid as a conductive layer to achieve signal transmission through sensing touch. Copper metal mesh touch sensors are widely used in various consumer electronics and industrial control devices, such as mobile phones, tablets, laptops, automotive electronics, industrial touch screens, etc. Its high transmittance, low resistance, and high reliability make it an ideal touch solution in these fields.

Metal Mesh capacitive touch technology is the process of densely arranging wires of conductive metals such as copper and their oxides on a PET substrate conductive layer to form a regularly shaped mesh. Based on the bonded conductive film, signal transmission is achieved through inductive touch. Commonly used in touch screen process structures such as GFF, GF, GG, etc.
