## Abstracts

According to our latest research, the global Copper Ore Processing Line market size will reach USD 1638 million in 2031, growing at a CAGR of 3.3% over the analysis period.

Copper ore processing and production processes mainly include three processes: crushing, grinding, and beneficiation. In the crushing process, three-stage closed-circuit crushing is a modern method suitable for high-hardness copper ore crushing. It can complete the crushing and partial dissociation of the ore, thereby improving the subsequent grinding efficiency; in the grinding process, two stages and one closed grinding design can make the copper ore grinding more fully; among the beneficiation processes, the more successful new processes that have emerged in recent years are mainly the mixed flotation process.
