According to our (Global Info Research) latest study, the global Copper Rod Continuous Casting and Rolling Line market size was valued at US\$ 185 million in 2025 and is forecast to a readjusted size of US\$ 239 million by 2032 with a CAGR of 3.7% during review period.

The Copper Rod Continuous Casting and Rolling Line (CCR) is an integrated production system that transforms molten copper into high-quality copper rod (typically 8mm or 12mm diameter) in a single, automated process. It combines continuous casting (solidification of molten copper) and hot rolling (forming into rod) for efficient, large-scale production of electrolytic copper (ETP) or oxygen-free copper (OFE) rods, widely used in wire & cable, electrical conductors, and other industries.

From a regional perspective, the Asia-Pacific region is the main market for the Copper Rod Continuous Casting and Rolling Line industry, accounting for about 67.59% of the global market share. This is mainly due to the promotion of economic growth and the acceleration of industrialization in the Asia-Pacific region. In the next few years, the Asia-Pacific region will play a more important role. In addition to China, the United States and Europe, Japan, South Korea, India, Southeast Asia and Australia are still important markets that cannot be ignored. The market share in Latin America, the Middle East and Africa is relatively small, but with the development of the economy and the acceleration of industrialization in these regions, the demand for Copper Rod Continuous Casting and Rolling Lines is also gradually increasing.

In terms of product raw material type, Copper Rod Continuous Casting and Rolling Lines are mainly used to produce copper rods, and the raw materials of copper rods are

mainly electrolytic copper and scrap copper. At present, electrolytic copper is the main type of raw material, accounting for more than 70% of the global market share. This is mainly because electrolytic copper has high purity and stable supply. Scrap copper as a raw material type for copper rods has a relatively small market share, but with the improvement of environmental awareness and the advancement of scrap copper recycling technology, the use of scrap copper is expected to gradually increase.

From the perspective of product market application, copper rod continuous casting and rolling machines are mainly used in the production of copper rods. Copper rods are widely used in power, electronics, communications, construction and other fields. In the field of power, copper rods are used to manufacture cables and wires to transmit electrical energy. In the field of electronics, copper rods are used to manufacture electronic components such as circuit boards and radiators. In the field of communications, copper rods are used to manufacture communication cables and optical fibers. In the construction field, copper rods are mainly used in power systems, air conditioning systems, HVAC systems, etc. With the continuous development and expansion of these fields, the market demand for Copper Rod Continuous Casting and Rolling Lines is also increasing.

At present, major global companies include SMS group, Southwire Company, LLC and Continuus-Properzi spa. In 2024, the world's top three vendors accounted for approximately 86.85% of the revenue. It is expected that the industry competition will become more intense in the next few years, especially in the Chinese market.
