The global Copper Rod Point Cooler market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The Copper Rod Point Cooler is a device used in the production of copper wire and cable. It is designed to cool and solidify the copper at the point where it exits the casting machine and begins to solidify into a rod shape. The point cooler is typically made of a series of water-cooled copper plates or blocks that are positioned around the copper rod. As the copper exits the casting machine, it comes into contact with the cooled plates or blocks, which rapidly cool the copper and solidify it into a rod shape. The point cooler is an important component in the production of high-quality copper wire and cable, as it helps to ensure that the copper is properly cooled and solidified, which can improve the strength and durability of the finished product.
