According to our (Global Info Research) latest study, the global Copper Salts market size was valued at US\$ 3229 million in 2025 and is forecast to a readjusted size of US\$ 4568 million by 2032 with a CAGR of 5.0% during review period.

Copper salts refer to a type of copper compound formed by copper ions reacting with inorganic acid ions, organic acid ions, or complex ligands, including both monovalent and divalent copper salts. Common products include copper sulfate, copper chloride, cuprous chloride, copper nitrate, copper acetate, basic copper carbonate, basic copper chloride, copper oxychloride, copper hydroxide, copper pyrophosphate, copper methanesulfonate, copper glycinate, copper methionine, etc. Copper salts have functions such as sterilization, anti-corrosion, catalysis, conductive deposition, complexation, coloring, and trace element supplementation, and are widely used as pesticide fungicides, feed additives, electroplating, electronic chemicals, etc PCB? In the fields of semiconductor packaging, water treatment, wood preservation, pigments, catalysts, pharmaceutical intermediates, and experimental reagents. Among them, copper sulfate is the most widely used basic copper salt, while high-purity copper sulfate, high-purity copper chloride, and copper methanesulfonate are more inclined towards electroplating, electronic chemicals, and advanced manufacturing applications. Copper oxychloride, copper hydroxide, and basic copper sulfate are mainly used in agricultural fungicide systems. In 2025, global Copper Salts production reached approximately 965.37 K MT, with an average global market price of around US\$ 3,251 per MT.

The copper salt market belongs to the cross market of basic chemical and functional materials, with stable overall demand but differentiated product structure. Basic copper salts are mainly copper sulfate, copper chloride, basic copper carbonate, and copper

oxychloride, with demand mainly coming from agricultural fungicides, feed copper sources, electroplating, water treatment, and industrial chemicals; High value-added copper salts are concentrated in electronic grade copper sulfate, PCB electroplating copper salts, high-purity copper salts for semiconductor packaging, complex copper salts, and special catalytic copper salts. Public market data shows that the demand for copper sulfate is still supported by applications such as agricultural fungicides, fertilizers, animal feed, electroplating, and chemical manufacturing, and the Asia Pacific region holds an important position in the copper sulfate market. In the future, industry competition will not only focus on the scale and cost of ordinary copper salts, but will also shift more towards purity control, heavy metal impurity control, particle and solubility performance, electronic grade cleanliness, customer certification, environmental compliance, and comprehensive utilization of by-product resources. The fields of agriculture and feed focus more on registration compliance, stability, and bioavailability, while the fields of electronics and electroplating focus more on metal impurities, particles, moisture, and batch consistency. The fields of catalysts and pharmaceutical intermediates place more emphasis on specific valence states, crystal forms, chelating abilities, and reaction adaptability. With the development of PCB, semiconductor packaging, new energy, electroplating surface treatment, and efficient agriculture, the growth elasticity of high-purity electronic grade copper salts, complex copper salts, and special copper salts will be higher than that of ordinary industrial grade products. However, basic categories such as ordinary copper sulfate are still the market chassis. If enterprises have copper resources, wet metallurgy, by-product acid utilization, refining and purification, and downstream application development capabilities at the same time, they will be more likely to form competitive advantages in both cost and high-end aspects.
