## Abstracts

According to our (Global Info Research) latest study, the global Copper Sulfate Algaecide market size was valued at US\$ 100 million in 2024 and is forecast to a readjusted size of USD 149 million by 2031 with a CAGR of 5.8% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Copper sulfate algaecide is a chemical agent with copper ions as the active ingredient. It has the appearance of blue asymmetric triclinic crystals or powders. It is easily soluble in water and the aqueous solution is acidic. The algaecide combines copper ions with sulfhydryl groups in algae cell surface proteins and enzymes to destroy the photosynthetic reaction system of algae cells, inhibit their growth metabolism and cause cell death, thereby effectively controlling the reproduction of algae in the water. Its algae removal principle is based on the toxic effect of heavy metal ions. It can significantly reduce the biomass of aquatic plants such as green algae and black algae in closed or semi-closed environments such as swimming pools and landscape water bodies, and prevent water turbidity, discoloration and eutrophication caused by excessive algae proliferation.

This report is a detailed and comprehensive analysis for global Copper Sulfate Algaecide market.
