Abstracts

The global Copra Meal for Feed market size is expected to reach \$ 770 million by 2032, rising at a market growth of 4.7% CAGR during the forecast period (2026-2032).

Copra Meal is the nutrient rich residue left after extracting oil from dried coconut kernels (dried coconut). It is a brown, highly palatable feed ingredient and a high-quality source of energy and protein for a variety of livestock, from cows to racehorses. Unlike other protein feeds that only serve as fillers, this ingredient provides a unique combination of rumen protein and easily digestible fiber. It is mainly produced through two methods:

Mechanical extrusion: This method uses physical pressure to extrude grease. Usually, this method produces feed with a high residual oil content (8-12%), which can provide additional energy for animals.

Solvent extraction: Chemical solvents can almost remove all oils and fats, resulting in products with lower fat content (1-3%) and slightly higher protein concentration but lower metabolic energy.

In 2025, global Copra Meal for Feed production reached approximately 1,253 K MT, with an average global market price of around US\$ 430 per MT.

Copra Meal for Feed has an annual production capacity of 1,800 tons and a gross profit margin of around 20%

The upstream mainly consists of coconut cultivation and coconut oil production industries, including coconut plantations, coconut oil processing enterprises, and coconut oil pressing enterprises. The core raw materials are by-products from the

coconut oil and coconut oil processing process; The midstream is a copra meal production and processing enterprise, responsible for pressing, drying, crushing, and granulation treatment; The downstream is mainly used in the feed industry, including ruminant feed enterprises, poultry feed enterprises, aquatic feed enterprises, and some pet food enterprises. At the same time, some products are exported to the Chinese, European, and Middle Eastern markets through international trade.

The cost structure of copra meal for feed mainly consists of raw material cost, processing cost, energy cost, and transportation cost. Among them, the cost of raw coconut jerky accounts for the highest proportion, generally about 60% to 70% of the total cost; The depreciation cost of processing and equipment accounts for about 10% to 15%; Energy and labor costs account for approximately 8% to 12%; Packaging and logistics transportation costs account for approximately 8% to 12%.
