## Abstracts

The global Coprinus Comatus Powder market size is expected to reach \$ 129 million by 2032, rising at a market growth of 4.9% CAGR during the forecast period (2026-2032).

Coprinus comatus powder is a natural food ingredient or raw material powder made from the edible fungus \*Coprinus comatus\* (commonly known as chicken leg mushroom), through drying and grinding. It provides rich protein, dietary fiber, polysaccharides, and minerals, and has potential benefits such as aiding in blood sugar regulation, promoting digestion, and supplementing nutrition. It addresses the demand of the health food and functional ingredient industries for natural mushroom raw materials with mild flavor, high nutritional value, and specific health benefits, providing an easy-to-use and safe raw material option for fortified foods, special dietary foods, and some health supplements. The upstream supply chain mainly includes the large-scale agricultural cultivation of chicken leg mushrooms, fresh mushroom harvesting, cleaning and hot-air/freeze-drying, and coarse grinding processing. The core focus is on ensuring the freshness of the raw materials, the absence of pesticide residues, and the stability of the drying process. The downstream supply chain mainly serves food processing companies (as a nutritional fortifier in noodles and biscuits), health supplement companies (for products that help lower blood sugar), catering, and animal nutrition. In 2025, the production of coprinus comatus powder is estimated at approximately 3,000 tons, with an average price of approximately US\$30/kg, a gross profit margin of approximately 30%, and a single-line production capacity of approximately 70 tons/year.

This report studies the global Coprinus Comatus Powder production, demand, key manufacturers, and key regions.
