Abstracts

The global Corded Heat Guns market size is expected to reach \$ 1373 million by 2032, rising at a market growth of 3.4% CAGR during the forecast period (2026-2032).

A corded heat gun is a tool that obtains power through a power cord, unlike battery-powered wireless models. Its advantages include continuous and stable high power output, no battery anxiety, lower cost, and mature technology, making it suitable for industrial environments requiring long-term, high-load operation. In 2025, global Corded Heat Guns production reached approximately 20,980 k units, with an average global market price of around 50 US\$/Unit. The production capacity of Corded Heat Guns reaches 26,200 k units, and the industry's gross profit margin is approximately between 20% and 40%.

The market demand for corded heat guns is steadily growing, primarily driven by multiple factors, including the electronics manufacturing industry's shift towards high-density and lead-free production, the increasing demand for repair processes in the new energy vehicle and consumer electronics sectors, the shift towards thermal stripping due to building renovation and environmental regulations restricting the use of chemical paint removers, the growing reliance of industrial automated production lines on localized heating equipment, and users' ever-increasing requirements for tool safety, temperature control accuracy, and long-term durability. Simultaneously, the trend towards localization of the global supply chain is prompting more regional markets to strengthen their local repair and manufacturing capabilities, further expanding the demand for professional corded heat guns.

This report studies the global Corded Heat Guns production, demand, key manufacturers, and key regions.
