Abstracts

The global Corded Vacuum Cleaner market size is expected to reach $ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A vacuum cleaner is a device that uses an air pump to create a partial vacuum to suck up dust and dirt, usually from floors, and from other surfaces such as upholstery and draperies. The dirt is collected by either a dust bag or a cyclone for later disposal. Vacuum cleaners, which are used in homes as well as in industry, exist in a variety of sizes and models—small battery-powered hand-held devices, wheeled canister models for home use, domestic central vacuum cleaners, huge stationary industrial appliances that can handle several hundred litres of dust before being emptied, and self-propelled vacuum trucks for recovery of large spills or removal of contaminated soil. Specialized shop vacuums can be used to suck up both dust and liquids.

This report studies the Corded Vacuum Cleaner market. Corded vacuums are plugged into the mains power so they generally have stronger suction power, particularly on carpets. For this reason, corded vacuums tend to be best for bigger homes with lots of carpet, pets and kids.

This report studies the global Corded Vacuum Cleaner production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Corded Vacuum Cleaner, and provides market size (US$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year. This report explores demand trends and competition, as well as details the characteristics of Corded Vacuum Cleaner that contribute to its increasing demand across many markets.
